

sievenna User's Manual

Onni Aarne

January 20, 2018

sievenna is a command-line application for compressing files. To use it, write

```
$ sievenna -c <input> <output>
```

where `<input>` is the path of the file you wish to compress, and `<output>` is the path of the compressed file.

When compressing, if the output path is omitted, it defaults to `<input>.sie`.

To decompress, replace the `-c` flag with `-d`.

To log progress and statistics to console, use the flag `-l`.
